

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph [0033], on page 7, as follows:

[0033] Coupler 170 may also be linked to a power source for imaging device 100. For example, coupler 170 is shown in FIG 3(b) electrically linked to the power converter 330 by ~~insulted~~ insulated wire(s) 320. Mating coupler 270 is also linked to the electrical components of media adapter 200, such as the internal light source. Accordingly, when media adapter 200 is mechanically coupled to the imaging device 100, an electrical signal link is established between the power converter 330 for the imaging device 100 and the electrical components of media adapter 200. No external power cords need to be provided for supplying electrical power to the media adapter 200.
